1. Applicant's election without traverse of claims 1 and 2 in the reply filed on 11/22/04 is acknowledged.
2. Claims 3-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 11/22/04.
3. The disclosure is objected to because of the following informalities: The applicants should update the "CROSS REFERENCE TO RELATED APPLICATIONS" in page 1 of the written description. The applicants should list the patent no. of application serial no. 09/272,337 in page 1 of the written description.

Appropriate correction is required.

4. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
5. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 6, the phrase "an interface of the semiconductor substrate" is unclear as to what elements forming the interface. Fig. 8B shows the signal accumulating section [40] formed at a position apart from a top surface of the semiconductor substrate [32]. It is believed that the signal accumulating section formed at a position apart from a top surface of the semiconductor substrate.

Claim 1, line 23, the phrase "an opposite side of the gate electrode" is unclear. Is it being referred to a second side of the gate electrode opposite to a first side of the gate electrode formed adjacent to the photoelectric conversion region?

6. Claim 1 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

7. The following is a statement of reasons for the indication of allowable subject matter: The major difference in the claims not found in the prior art of record is a barrier layer formed at least close to a lower part of the first-conduction-type detecting node section of the MOS field effect transistor.
